Raw Font Tables

Scott Pakin, *scott+clsl@pakin.org*

19 January 2017

This document presents, in alphabetical order, font tables for all of the fonts that appear in the *Comprehensive LaTeX Symbol List*. It was mechanically produced using a script that extracts the list of fonts used by the *Comprehensive LaTeX Symbol List* and feeds this list into Knuth's `testfont.tex`, which is included in all TeX distributions and can typeset font tables. The purpose of this document is to provide a companion mechanism for locating symbols by organizing the myriad symbols available to TeX and LaTeX by font family rather than by LaTeX symbol name. It may also reveal some unnamed symbols—or symbols overlooked by the *Comprehensive LaTeX Symbol List*.

On the other hand, not every symbol shown in the *Comprehensive LaTeX Symbol List* appears in this document. Some symbols are defined by juxtaposing multiple other symbols; some symbols are defined in terms of graphics primitives instead of fonts. The tables shown in this document are only those that correspond to "true" fonts—glyphs drawn in METAFONT, PostScript, or other such font formats and that have an associated TeX font metric (`.tfm`) file.

In each table, characters are numbered in both base 8 (octal) and base 16 (hexadecimal). A character's octal position is formed by taking the first two octal digits from a table's left column and the third octal digit from the top row. A character's hexadecimal position is formed by taking the first hexadecimal digit from a table's right column and the second hexadecimal digit from either the top or the bottom row, based on whether the character lies in the upper or lower row associated with the first hexadecimal digit. To clarify this description with an example, the "△" symbol in the `cmsy10` table can be produced by either `\char'064` (octal) or `\char"34` (hexadecimal). The "ℜ" symbol that lies directly beneath that in the table can be produced by either `\char'074` (octal) or `\char"3C` (hexadecimal). The decimal equivalents of these are `\char52` and `\char60`, and their character equivalents are "`4`" and "`<`", respectively.

A
